

AI Assessment – Multi-Step Workflow

Name: K. Niharika

Register Number: 99230040633

Selected Scenario: Content Campaign

Step 1 – Extraction / Planning

Prompt:

Act as a content marketing strategist. Create an outline for a campaign promoting AI tools for college students. Identify the target audience, three key themes, the main benefits of AI for students, and the tone of the campaign. Present the response in a clear structured format.

AI Response:

- Target Audience: College students
- Theme 1: AI for faster and smarter learning
- Theme 2: AI for assignments and productivity
- Theme 3: Responsible and ethical use of AI
- Key Benefits: Saves time, improves understanding, supports research and productivity
- Tone: Friendly, simple, informative and motivating

Step 2 – Generation / Drafting

Prompt:

Using the campaign outline from Step 1, write a detailed article titled “How AI Can Help College Students Learn Smarter”. Explain the three themes identified earlier. Keep the language simple, practical and student-friendly. Include an introduction, main sections and conclusion.

AI Response:

How AI Can Help College Students Learn Smarter

Artificial Intelligence is becoming a useful tool for college students. When used responsibly, AI can help students understand difficult topics, organize their work and save valuable time.

1. AI for Learning

Students can use AI to explain difficult concepts in simple words, create summaries and generate practice questions. This can make learning more interactive and easier to understand.

2. AI for Assignments and Productivity

AI can help students brainstorm ideas, organize notes, prepare outlines and improve their writing. It can also help students manage their study schedules and complete tasks more efficiently.

3. Responsible Use of AI

Students should use AI as a learning assistant rather than depending completely on it. They should verify information, avoid plagiarism and follow their college's academic rules.

AI Assessment – Multi-Step Workflow

Register Number: 99230040633

Continuation of Step 2 – AI Response

Conclusion

AI can make learning easier and more productive when students use it wisely. The goal should be to use AI to improve understanding and develop skills rather than simply getting answers.

Step 3 – Evaluation / Refinement

Prompt:

Review the article you created in Step 2 against these requirements: simple language, practical advice, all three campaign themes included, responsible AI usage, clear structure, and student-friendly tone. Identify any weaknesses and then produce a final polished version that fixes them.

AI Response / Final Version:

How AI Can Help College Students Learn Smarter

Artificial Intelligence is changing the way students learn and work. Used correctly, AI can help college students save time, understand difficult subjects and become more productive.

1. Learn Faster and Smarter

AI can explain difficult topics in simple language. Students can ask for examples, summaries, practice questions and step-by-step explanations. This makes learning more personalized and interactive.

2. Improve Assignments and Productivity

AI can help students brainstorm ideas, organize information, create outlines and improve their writing. It can also help with study planning and time management. However, students should make sure that the final work reflects their own understanding.

3. Use AI Responsibly

AI should be used as a learning assistant, not as a replacement for thinking. Students should verify important information, avoid copying AI-generated content directly and follow their institution's academic integrity rules.

Conclusion

AI can be a powerful learning partner for college students. By using it responsibly, students can learn more effectively, manage their time better and develop stronger academic skills.

Submission Note: The assessment requires the exact prompt chain, intermediate AI responses, and evidence such as a chat link or screenshot.
